support * Windows support * PS

MyEmoticons PC/Windows

MyEmoticons Free Download is a browser extension that boasts a huge collection of smileys and animations for Gmail, Twitter and Facebook users. The selection includes more than one thousand items and works on three major browsers: Internet Explorer, Firefox and Chrome. Most social platforms and email services feature a set of decent emoticons, but few of them can take credit for boasting stunning or addictive animations. Those who fancy more might find an alternative in third-party software, such as MyEmoticons Cracked Accounts. There's nothing complicated about this browser add-on, starting with the installation procedure and ending with the 'getting-used-to' part. A minor discomfort might come from the fact that deployment requires that all open browsers be restarted, but compensation comes from the richness of the emoticon collection. MyEmoticons Cracked Version is compatible with three major online services, namely Gmail, Twitter and Facebook. Locating the animations is not complicated either, since for all of these platforms, the add-on implements a panel that you just cannot miss. There are three major sections that you can check out and discover awesome avatars: Smileys & Emotions, Objects and Text. The first category includes meme faces and items that describe various feelings: love, sadness, surprise, as well as animations inspired by holidays such as Halloween and Thanksgiving. In the next category, a wide array of emoticons representing animals, activities, zodiac, food, music, movies, weather, sports and signs is available. If you fancy text animations, you should navigate to the last section for symbols, numbers, letters, and so on. On the downside, there's no possibility to customize any of the avatars. Even though their characteristics are satisfactory (size is decent and colors are cheerful), options to tweak their appearance would definitely come in handy. All in all, MyEmoticons fulfills its purpose, that of spicing up emails, tweets and Facebook chat sessions with lively animations. A side effect of using this add-on, besides the satisfaction of showing off to your friends, is a sudden change of mood in a positive way. DOWNLOAD LINK:

What's New In MyEmoticons?

Emoticons are a type of graphics used to express emotions. Different graphic styles are used to make each emoticon: from simple smileys and cartoon-like imagery to more sophisticated shapes such as animals, insects, trees, and buildings. However, most people seem to find these so-called emoji graphics to be too basic, with a limited number of available emoticons. But, if you are a very fond of emoticons, and a very demanding guy as well, then you should check out the Emoticon 2 website. This resource offers an extensive collection of emoticons, in different sizes, styles, colors, and effects. The emoticons have their own accompanying sound clips, so you can easily tell what they mean. All this functionality comes in a handy, elegant, and attractive software package. You can find it at the Emoticon 2 homepage. This software allows you to create your own emoticons and then use them in your emails. Just select the emoticon you want to use, click on it, and set its location and color. The location is usually relative to the email you are creating. For example, if you want to use a smiley on your email subject, select it, click on it, and then choose where you want to put it. The emoticon will appear in your email with its designated color. As for the sounds, you can choose between the default tones, that is, the default sound that is set on the emoticon. Alternatively, you can use a sound clip that will be played when you select the emoticon. You can also choose whether the emoticon should appear as a smiley or a tear or a frown. You can choose from many other emoticons, including many famous characters from cartoons, movies, or games. A limitation to the software is the inability to apply the emoticon to a message of any other user. Other than that, the program does a great job. You can easily create your own smileys and use them in emails, especially if you are a very fond of them. I use this tool for personal use, and have used it at many times. It is especially useful in email threads, as it will help you to easily identify the person and the group he is with, and also allow you to quickly change moods. And, I have to mention that it is very easy to customize the different emotions and sound files, which is a welcome addition. Aside from its great features and clean interface, one of the most important aspects of this program is its great compatibility with all major web browsers. Thus, in order to use this tool, you don't need to install it on your computer, but just visit its website from any of the browsers. The actual emoticon creation process is not difficult, as you can easily click on the emoticons you want to use, and customize them. There is also an option to download sound files that you can

System Requirements:
